The Electrical Mill.

See the following Fig. A is the water-wheel, B the cog-wheel on its axis, C the trundle turned by that wheel, and D the running mill-stone on the top of the axis of the trundle. It may easily be turned by electricity, if instead of the round plate D for the mill-stone, there be a horizontal wheel on the axis of the trundle C, with spur-cogs, which will turn two

trundles placed on its opposite sides ; and on the top of each axis of the trundles, may be a round plate, representing a mill-stone : so that this model has all
