¶ Caput secundum de totius anni partium dñis

¶ Antecessores nostri haud parum utilitatis credebant existere in eo si rite anni dominatores designarent. Sed quia signum ascendens mobile est quo fit ut singulis quibus anni singuli dominatores possunt Teste albūasar de floribus quidem in hec verba Scito quod annus cum fuerit eius ascendens in fortitudine sua in eodem anno hora descensionis solis in arietem cum fuerit ascendens signum fixum non revolvat quartas in eodem anno poterit enim tibi sufficere. ascendens eiusdem anni si ducta est huius rei est signum fixum porro si fuerit signum commune necesse est sepe ut revolvat annum ad horam descensionis solis in primo minuto libere si autem fuerit ascendens signum mobile necesse est tibi equare introitum solis in omni quarta ex revolutioe huius ille. Sed quia ascendens est signum mobile. quare alter et alter eligat dominus per quartas cum dominantibus generalibus. generalitate quia anni dominus et presertim veris luna quia in ascendente. aralatioe. triplicitate et termino cui codominat veniens. Saturnus enim et mars peregrini dominio privant sic iupiter. sol cadens et si sit apodiatus non dominatur mercurius in suo detrimento et casu non dominatur cum enim in sunctionali et conjunctionali luminaria non eliguntur per eis maxime introitus sufficere videtur. Estatis dominus mercurius in septima domo et sua triplicitate Autem dominus iupiter secundum albūasar Hic enim luna dominatur quicquid ceteri minus efficaces.
